EXPERIENCE

Nextbridge Private Limited, Lahore — *Principal Software Engineer*

October 2024 - PRESENT

Leading the design and development of scalable software architectures while mentoring a team of full-stack developers. Driving technical strategy, performance optimization, and best coding practices to ensure efficient project execution. Collaborating with stakeholders to translate business needs into robust, maintainable solutions. Solving complex technical challenges and streamlining development workflows for enhanced efficiency.

Nextbridge Private Limited, Lahore — *Senior Software Engineer*

MARCH 2019 - OCTOBER 2024

As a Senior Software Engineer at Nextbridge Private Limited, I lead a team of full-stack developers, ensuring efficient project execution and delivering high-quality features on time. My role involves designing scalable system architectures, mentoring team members, and collaborating with clients to translate requirements into actionable tasks.

Nextbridge Private Limited, Lahore — *Software Engineer*

MARCH 2018 - MARCH 2019

As a Software Engineer at Nextbridge Private Limited, I developed, tested, and maintained high-quality code for web applications while collaborating with cross-functional teams to deliver features within deadlines. I contributed to scalable system architectures, performed debugging, and ensured adherence to coding standards through unit testing and code reviews.

Spix Systems Limited, Lahore — *Web Developer*

June 2016 - Dec 2017

As a Web Developer at Spix Systems Limited, I developed and maintained dynamic websites, ensuring seamless integration of front-end and back-end functionalities. I optimized website performance, implemented responsive designs, and resolved issues to meet client requirements while pursuing my BSCS degree.

SKILLS

PHP

LARAVEL

VUE JS

MYSQL

SCRIPTING / AUTOMATION

AWARDS & RECOGNITION

– Received client appreciation for solving complex challenges and delivering high-impact solutions, accompanied by monetary rewards

– Recognized for exceptional performance and dedication on bulk data processing & database records recovery.

– Earned bonuses and client commendations for consistently exceeding expectations.

English

EDUCATION

University of Sargodha, Sargodha — *BSCS*

AUGUST 2013 - OCTOBER 2017

The Brain College For Boys, Lahore — *I.C.S*

AUGUST 2012 - JUNE 2013

PROJECTS

(Confidential Project) — *Crowdsourcing platform*

Maintained and developed features in that project. Done many optimizations in back-end applications for better performance. I also helped associates/team members. As a dedicated software developer, I oversaw our project's ongoing enhancement and stability. In addition to my responsibilities with the project itself, I actively supported and guided fellow associates in their development efforts. Whether it's troubleshooting technical issues, offering insights on best practices, or providing mentorship on coding techniques, I strived to empower my colleagues to excel in their roles.

Through effective project maintenance and collaborative development efforts, I contributed to the success and growth of our team, fostering a culture of innovation and continuous improvement.

Falvey Insurance SDK — Seamless SOAP API Integration for Laravel

I developed a custom Laravel SDK package to streamline the integration of Falvey Insurance's SOAP APIs into Laravel applications. Traditionally, integrating these APIs required developers to write complex SOAP request handlers from scratch, making the process tedious and error-prone. To solve this, I built a package that simplifies the entire workflow—allowing developers to install the SDK, specify an endpoint, and send data without worrying about SOAP complexities. This package was developed for a private bulk buying group that provides insurance for high-value packages, enabling them to seamlessly connect their Laravel-based systems with Falvey Insurance. By automating SOAP request handling, authentication, and error management, the SDK reduces development effort, ensures reliability, and accelerates API consumption for businesses using Falvey's services.

NetSites USA — *eCommerce platform*

I developed and managed a robust eCommerce platform for Net Sites USA, a prominent car seat manufacturing business. The project encompassed end-to-end development and comprehensive maintenance for their official store and its associated network of marketing sites.

Dealership Experts

Dealership Experts is a specialized job portal designed exclusively for connecting automotive experts with dealerships and auto-related businesses. The platform streamlines the recruitment process by providing a dedicated space for skilled auto professionals, including mechanics, technicians, sales consultants, and service advisors, to find relevant opportunities in the automotive industry.

Key features of the portal include:
- Job Listings: Comprehensive job postings from dealerships and auto companies, categorized by roles, skills, and locations.
- Resume Management: Allows candidates to create, upload, and manage professional resumes tailored to automotive roles.
- Search and Matching: Advanced search filters for matching candidates with the best job opportunities based on their experience and skills
- Employer Dashboard: Enables dealerships to manage job postings, review applications, and streamline candidate hiring.
- Candidate Dashboard: Helps job seekers track applications, save jobs, and receive notifications for matching job openings.

My role in this project:
I provided maintenance and feature development services, ensuring the platform operates smoothly and continues to evolve with new functionalities to meet the dynamic needs of the automotive recruitment industry. My responsibilities included:
- Bug fixing and performance optimization for seamless user experience.
- Implementing new features to enhance usability for job seekers and employers.
- Ensuring the platform remains secure and scalable as the user base grows.

Idara Tul Mustafa Event Manager

The Event Planner application is a tailored solution designed for a party's religious scholars to streamline event scheduling and management. Built from the ground up using Laravel PHP, Blade templates, jQuery, Bootstrap, and MySQL, the platform addresses the inefficiencies of manual booking processes, particularly eliminating the challenge of overlapping events. The application enables the registration of scholars, each with a personalized

calendar to manage bookings and events efficiently. After attending an event, scholars can provide feedback on the organizers for future reference, fostering accountability and transparency.

AgentPet.com

Worked as a Full-Stack Developer in a team to build an online platform for buying and selling pets, integrated with eCommerce features for pet accessories and food. Developed a location-based search tool to help users find nearby pet stores and service providers. Enabled pet relocation services, ensuring a seamless experience for pet owners. Focused on scalability, performance, and user-friendly design to enhance the platform's functionality.

MedLucy Healthcare Software

Contributed as a team member to the development of MedLucy, a comprehensive healthcare solution for Luxembourg's medical sector. Focused on creating an intuitive admin panel to manage patients, doctors, and secretaries. Collaborated on integrating features like appointment scheduling, medical billing, and record management. Played a key role in optimizing workflows for seamless healthcare operations.
